CONFERENCE PROGRAM

SCIENTIFIC PROGRAM

Subjects of section meetings:

- Energy efficient architecture and city construction, modern energy effective construction solutions and materials. Math and computer-generated modelling in researching energy saving objects, processes and systems.
- Development of the legal basis on energy efficiency. Energy management and energy saving economics.
- Energy resources saving. Energy efficient systems and technologies of power generating capacity, transportation and consumption of energy. IT technologies for designing and calculating heat provision systems.
- Unconventional and renewable energy sources technologies in energy-saving architecture.

2nd plenary meeting (ROUND TABLE):

Integration in solving architecture and construction energy efficiency issues; ideology and development concept; integrated usage of energy-saving architecture, construction and engineering-technological solutions.

EXPOSITIONAL PROGRAM

During the conference their participants will be given the opportunity to present the scientific technical developments with energy saving architecture, energy saving technologies, scientific methodological and etc.

CONFERENCE WORKING LANGUAGES:
